

ABSTRACT

5 A printhead assembly is provided comprising at least one printhead module comprising at least two
printhead integrated circuits, each of which has nozzles formed therein for delivering printing fluid onto the
surface of print media, a support member supporting and carrying the printing fluid for the at least two
10 printhead integrated circuits, and an electrical connector for connecting electrical signals to the at least two
printhead integrated circuits. The assembly further comprises a plurality of longitudinally extending electrical
conductors for providing power from a power supply to the at least two printhead integrated circuits, being
arranged as two groups of electrical conductors respectively connected to the power supply at respective ends
15 of the printhead assembly, respective ones of electrical conductors of the two groups of electrical conductors
being connected together at abutting regions intermediate the ends of the printhead assembly.
